High level accuracy, Vector Network Analyzers and reflectometers on high compact phase of use USB Windows Interface for a wide variety of applications:

- CATV network building (headends, amplifiers, optical telecommunication equipment, filters and splitters, multiservice network monitoring and control systems)
- Test and measurement (vector network analyzers, automatic calibration modules; terrestrial, cable, and satellite TV meters)
- Wireless data transmission (telemetry systems, security systems, remote control systems)

SignalCore's design and manufactures in Modular and PXI express, RF signal sources, up and down converters, distribution amplifiers that meet the most demanding requirements for highly linear and low noise, low phase noise applications.

www.signalcore.com

VTI test modular systems in LXI, PXI, VXI format, for critical applications in distribution, electronic signal commutation, acquisition and monitoring. In alliance with VTI Instruments, MexSer contribute from portable system develops of RF and Aeronautic tests, to hand key systems, as structural analysis, turbines, thermodynamic, energy, automotive and an endless number of applications.

As Distributor of JBC Soldering since 2003, MexSer offers experience, knowledge, test equipment and demonstration for your most critical applications, also optimum delivery times.

JBC produces soldering stations and repair equipment, with benefits as energy saving, tips duration and the widest variety of tips for all type of applications, from components with 0402(01005) size, to high power and thermal transfer tips.

www.mexser.com.mx/jbcsoldering

German technology on systems and automatic and semiautomatic equipment for:

- Removal and placement of components with varied densities and packaging, from BGA, CSP, QFN, MILF and LED. In the repair of electrical assemblies.
- Solder dispensers, recovers and adhesives.
- Recuperation and spin of BGA's equipment.

All the solutions on optimums size formats and with competitive costs.
